

Oje Opeoluwa Hezekiah

Waterloo, Ontario | Opeoluwaoje@gmail.com | +1 226-978-4145 | [LinkedIn](#)

Professional Summary

Junior Cybersecurity Analyst with over two (2) years of experience supporting security operations, vulnerability management, and security governance in enterprise environments. Skilled in SIEM monitoring, security alert triage, vulnerability assessments, and incident documentation using tools such as Splunk, Wazuh, Nessus, and Nmap. Experienced in maintaining security documentation, tracking remediation efforts, and supporting audit and compliance initiatives aligned with frameworks such as ISO 27001 and NIST Cybersecurity Framework. Strong analytical, organizational, and communication skills with the ability to coordinate with cross-functional teams and handle sensitive information in regulated environments.

Educational Credentials

Conestoga College

Waterloo, Canada

Graduate Certificate in Cybersecurity Response Planning (3.85/4.0)

Graduate Certificate in Information Technology Network Security (3.55/4.0)

Catholic University of Ghana

Sunyani, Ghana

Bachelor of Science in Computer Science

Project Experience

Vulnerability Assessment and Remediation

- Conducted vulnerability scans using Nessus and Nmap to identify exploitable vulnerabilities.
- Validated vulnerability findings and supported remediation and mitigation efforts.
- Verified remediation effectiveness and documented vulnerability lifecycle activities.

Threat Intelligence and Phishing Analysis

- Analyzed phishing emails, malicious URLs, and threat indicators to identify attack techniques.
- Documented threat intelligence findings and recommended mitigation strategies.
- Identified indicators of compromise to support incident response activities.

SIEM-Based Access Monitoring and Security Incident Response

- Deployed and configured Splunk SIEM for centralized log collection and monitoring.
- Investigated security alerts and suspicious activity across enterprise systems.
- Supported incident detection, alert triage, and response processes.

Work Experience

Information Technology Specialist

January 2023 - January 2024

Debikom Ventures Nig Ltd

- Monitored enterprise systems and triaged security alerts using SIEM platforms, supporting security operations and incident response activities.
- Performed vulnerability assessments using Nessus and Nmap, validated findings, and coordinated remediation efforts with IT teams.
- Investigated suspicious system activity through log analysis and event correlation, identifying indicators of compromise (IOCs).
- Maintained security documentation, remediation records, and incident reports to support internal audits and compliance initiatives.
- Administered Active Directory access controls, implementing role-based access control (RBAC) and least-privilege policies.
- Assisted with risk identification and remediation tracking, ensuring security issues were documented and resolved in a timely manner.
- Provided secure remote technical support and system troubleshooting, ensuring operational continuity and security compliance.
- Educated employees on cybersecurity awareness and best practices to reduce human-related security risk.

Achievement: Improved system security posture by proactively identifying vulnerabilities and supporting remediation initiatives.

IT Operations Analyst

September 2019- September 2021

Student Representative Council, Sunyani, Ghana

- Monitored network infrastructure, servers, and enterprise systems for security events and operational anomalies.
- Analyzed system logs to identify security threats, suspicious behavior, and potential compromise indicators.
- Supported incident response documentation and remediation tracking, ensuring accurate reporting of security events.
- Assisted with security documentation, system procedures, and operational guides to maintain knowledge consistency.
- Managed Active Directory user provisioning, authentication, and access reviews.
- Assisted with endpoint security, firewall configuration, and system hardening activities.
- Maintained system security baselines and documentation aligned with security best practices.

Skills and Technical Tools

- | | |
|---|--|
| • Cybersecurity Fundamentals & Best Practices | • Access Lifecycle Management |
| • Security Documentation & Policy Support | • Security Controls (ACLs, Rule Management) |
| • Vulnerability Scanning and Validation (Nessus, Nmap) | • Identity and Access Management (IAM) and Active Directory Security |
| • Security Frameworks and Compliance (NIST CSF, ISO 27001, ITIL) | • Log Analysis and Threat Detection |
| • Cyber Threat Intelligence Analysis | • Security Operations Center Monitoring |
| • Security Incident Detection and Response (SIEM Monitoring, Alert Triage, Incident Escalation, MITRE ATT&CK) | • Security Tools: Splunk, Wazuh SIEM |
| • Role-Based Access Control (RBAC) | • Authentication, Authorization, and Access Control Security |
| • Threat Hunting and IOC Analysis | • MFA and Secure Authentication Concepts |
| • Access Control Monitoring and Privilege Management | • Risk Assessment & Mitigation Practices |
| • Ticketing & Tracking: ServiceNow | • IOC Identification & Documentation |
| | • Incident Reporting & Documentation |

Tools and Security Framework Used

- Performed vulnerability assessments using Nessus and Nmap to identify security weaknesses, exposed services, and system misconfigurations.
- Developed and documented incident response playbooks for various cyber-attack scenarios (e.g., phishing, malware, and unauthorized access) to standardize SOC investigation, containment, and remediation procedures.
- Assisted with tracking security incidents and vulnerability remediation activities using ServiceNow ticketing system to support resolution and documentation.
- Configured and maintained Group Policy Objects (GPOs) to enforce authentication policies, password policies, and security configurations in Active Directory.
- Applied security best practices aligned with NIST CSF and ISO 27001 frameworks.
- Conducted vulnerability assessments and remediation planning to reduce attack surface.
- Supported secure authentication, authorization, and audit logging processes.
